

First design this network in cisco packet tracer and configure all devices with their ip addresses.

Now open the CLI interface for each router one by one and type the following commands for the respective routers. For example, here is the cli commands for router 0

Router> en

Router> config - t

Router(config)>router rip

Router(config)>version 2

Router(config)>network 193.165.1.0

Router(config)>network 193.165.1.96

Similarly type the commands for other routers..
